Cinema One
Installing the Rack-Mount Kit

The Kaleidescape Cinema One rack-mount kit is designed to fit standard 19-inch racks in 2 rack units.

1. Press the tab on the right side panel and slide toward the back of the Cinema One. Pull out to remove the side panel. Repeat on the left side.

2. Carefully turn the Cinema One upside down. Do not remove disk cartridges. Use a #2 Phillips screwdriver to remove the four feet from the bottom of the Cinema One.

3. With the Cinema One upside down, position the cooling duct with the flat side up and the grille facing the front of the Cinema One. Tighten the six captive screws on the cooling duct. Do not overtighten the screws (2 in-lbs max torque).

4. Gently turn the Cinema One right side up. Attach the rack ears to each side of the Cinema One using the eight rack ear screws. Be sure the arrows on the rack ears point downward. The Cinema One is now ready to be rack mounted.
